

There are four panoramas to explore for [the Western Lake Superior Sanitary District \(WLSSD\) wastewater treatment plant tour](#). In each panorama are several “hotspots” that link to additional information. These hot spots could be videos, articles, images, etc. In the space below describe what you learn from each of the “hotspots.” The hotspots labelled A-H follow the flow of water in the cleaning process. The other hotspots contain additional key information about WLSSD.

	Hotspot	Summary of Information
WLSSD Wastewater Treatment	What is WLSSD?	
	A: Where does wastewater enter the plant?	
	B: What happens after the bar screens?	
	C: How does the wastewater get cleaned?	
Far side of reactor deck	D: How does dirty looking water get clear?	
	E: Is the water filtered at all?	
Contact tanks	F. Is the water clean yet?	
	G: What happens to the solid part of the wastewater?	
	H. What happens to the final solid product?	

WLSDD Wastewater Treatment	How do we know the water is actually clean?	
	Why is there a pile of woodchips?	
	What's the loud noise?	
	How is water treated on the International Space Station?	
Gitchi-Gami-Ziibi	Exploring the St. Louis River Mystery	
	Gitchi-Gami-Ziibi: The Lake Superior River	
	St. Louis River Area of Concern	
	How is the Duluth-Superior Port used today?	
Contact Tanks	Why would farmers choose Field Green?	
	What is the process to get Field Green to farms?
